HVAC နှင်ပပ်ပြီ အလုပ်လုပ်နေသမျှများ ။ Marine & Offshore HVAC System

အကြောင်းကို ဖန်တီးတဲ့ ရေလှေသင်္ဘေလိုလိုသော သင်ဘော်သားများနှင့်

HVAC အကြောင်းကို ဝိတ်ပင်စားသော နည်းပညာ ကျောင်းသားများအတွက် ရည်ရွယ်၍

လှုပ်ပံ့ကု ရှင်းလင်းစွာ နားလည်သဘောပေါက်နိုင်စေရန် အတတ်နိုင်ဆုံး ကြိုးစားခဲ့

အသေးစိတ် ရှင်းလင်း တင်ပြ ထားပါသည်။

သီအိုရီများ၊ အဓိပ္ပါယ် ရှင်းလင်းချက်များနှင့် အတူ

ပရောဂျက် တစ်ခု၏ တင်းဒါအဆုံးသည် ပရောဂျက် ပြီးဆုံးသည် အထိ

ဒီဇိုင်း အင်ဂျင်နီယာ တစ်ယောက် တွေ့ကြုံရမည့် လုပ်ဆောင်ရမည့်

အလုပ်များကို အဓိက ထား၍ အစဉ်လိုက်အတိုင်း ပုံများ၊ စာများဖြင့်

ရှင်းလင်းစွာ တင်ပြထားသည့် အတွက် ပရောဂျက် တစ်ခုကို မည်ကဲ့သို့ လုပ်ဆောင်ရမည်

ဆိုတာကို ကောင်းစွာ သဘောပေါက် နားလည် သွားမည် ဖြစ်သလို

HVAC engineer တစ်ယောက် အနေနှင့် အလုပ်ပင်ရန် အဆင်သင့် ဖြစ်သွားမည်။

ဘာသာပြန်သူ

Chapter (1) Underlining Fundamentals 1

1.1 Basic of the Psychrometric Chart 1

1.2 Psychrometric Properties 1

1.3 Relative Humidity (RH) 1

1.4 Dew-point Temperature (t_{dp}) 1

1.5 Wet-bulb Temperature (t_{wb}) 1

1.6 Dew-point Temperature (t_{dp}) 1

1.7 Relative Humidity (RH) 1

1.8 Specific Enthalpy (h) 1

1.9 Specific Volume (v) 1

1.10 Humidity Ratio (W) 1

1.11 Water Vapour Pressure (p_{wv}) 1

1.12 Psychrometric Process 1

1.13 Cooling Coil Process 1

1.14 Load Calculation 1

1.15 Additional Information & Useful Formulae 1

Chapter (2) Introduction 41

2.1 Saturation Temperature 41

2.2 Latent Heat 41

2.3 Basic Refrigeration Cycle 41

2.4 Understanding of P-H Chart 41

2.5 Understanding of Bubble Point, Dew Point and Temperature Glide 41

Chapter (3) Refrigerants 43

3.1 Refrigerant History 43

3.2 Classification of Refrigerants 43

3.2.1 Halocarbons 43

3.2.2 Hydrocarbons (HCs) 43

3.2.3 Inorganic Compounds 43

3.2.4 Azeotropic Mixtures 43

3.2.5 Nonazeotropic (Zeotropic) Mixtures 43

Content Page

3.3 Prefixes of Refrigerants 44

3.4 Numbering of Refrigerants 44

3.4.1 Decoding the Number 44

3.4.2 Isomers 45

3.5 Secondary Refrigerants 46

3.6 Stratospheric Ozone Layer Depletion 46

3.7 Ozone Depletion Potential (ODP) 46

3.8 Greenhouse Effect (Global Climate Change) 46

3.9 Global Warming Potential (GWP) 47

3.10 Safety Group Classifications 48

3.11 Secondary Refrigerants 49

3.12. Alternative Refrigerants 50

3.13. Selection of Refrigerants 50

3.14 Comparison of Refrigerant Performance 51

3.15 Refrigerant Cylinder Color 51

3.16 Refrigerants Phase Out Schedule According to Montreal Protocol 51

Chapter (4) Heat Transfer 57

4.1 Conduction 57

4.2 Convection 57

4.3 Radiation 57

4.4 Additional Information 57

Chapter (5) Heating Load & Cooling Load Calculation Procedures 101

5.1 International Standard (ISO 7547) 101

5.1.1 Accommodation 101

5.1.2 Design Conditions 101

5.1.3 Occupancy 101

5.2 Calculation of Heat Gains and Losses 101

5.2.1 Heat Transmission 101

5.2.2 Solar Heat Gain 101

5.2.3 Heat Gain from Persons 101

5.2.4 Heat Gain from Lighting and Other Sources 101

Content Page

5.3 Airflow Calculation 101

5.3.1 Volume of Space 101

5.3.2 Supply Airflow 101

5.3.3 Temperature of Supply Airflow 101

5.3.4 Exhaust Airflow 101

5.3.5 Air Balance 101

Annex A (informative) Guidance and good practice in the accommodation and air-conditioning systems in ships 101

Annex B (informative) Thermal Conductivities of Commonly Used Construction Materials 101

5.4 International Standard ISO 8864 101

5.4.1 Design Conditions 101

5.4.2 Occupancy 101

5.4.3 Calculation of Heat Gains and Losses 101

5.4.4 Air flow calculation 101

Annex Guidance and good practice 101

5.5 International Standard ISO 8862 101

5.5.1 Design Conditions 101

5.5.2 Occupancy 101

5.5.3 Calculation of heat gains 101

5.5.4 Air flow calculation 101

Annex Guidance and good practice 101

5.6 Additional Information 101

Chapter (6) Heat Transfer 125

6.2 Understanding the work before Starting engineering 125

6.3 Starting Engineering 125

6.2.1 Inputs (or) Design Requirements 125

6.2.2 Air Change 125

6.2.3 Cooling Capacity and Heating Capacity 125

6.2.4 Selection of Main Equipment 125

6.3 Classification 125

6.4 Client's Specification 125

Chapter (7) Heating & Cooling Loads Calculation Examples 137

7.1 Load Calculations for Wheelhouse AHU Sizing 137

Content Page

7.1.1 Design Conditions 137

7.1.2 Heat Transmission Calculation for Summer 137

7.1.3 Solar Heat Gain 137

7.1.4 Heat Gain from Persons 137

7.1.5 Heat Gain from Lighting and Other Sources 137

7.1.6 Total Heat Gain 137

7.1.7 Heat Transmission Calculation for Winter 137

7.1.8 Final Air Change and Air Quantity 137

7.1.9 Heating Load 137

7.2 Load Calculations for Accommodation AHU Sizing 137

7.2.1 Heat Transmission Calculation for Summer 137

7.2.2 Solar Heat Gain 137

7.2.3 Heat Gain from Persons 137

7.2.4 Heat Gain from Lighting and Other Sources 137

7.2.5 Total Heat Gain 137

7.2.6 Heat Transmission Calculation for Winter 137

7.2.7 Final Air Change and Air Quantity 137

7.2.8 Equipment Sizing 137

7.3 Comparison of Capacities After Taking the Density Effect into Consideration 137

Chapter (8) Chillers 143

8.1 Introduction 143

8.1.1. Reciprocating Compressor 143

8.1.2 Rotary Compressor 143

8.1.3 Centrifugal Compressor 143

8.1.4 Absorption Chiller 143

8.1.5 Compressor Selection 143

8.2 Evaporator 143

8.2.1 Flooded Shell and Tube Evaporator 143

8.2.2 Direct Expansion Evaporator 143

8.2.3 Plate Type Evaporator 143

8.3 Condenser 143

8.3.1 Water-cooled Condenser 143

8.3.1.1 Shell and Tube Condenser 143

Content Page

8.3.1.2 Tube-in-Tube Condenser 143

8.3.1.3 Brazed Plate Condenser 143

8.3.1.5 Heat Removal and Heat Transfer 143

8.3.1.6 Understanding of Log Mean Temperature Difference (LMTD) 143

8.3.1.7 Suggestion for Design Consideration of Condensers 143

8.3.1.8 Codes and Standards 143

8.3.1.9 Design Pressure 143

8.3.2 Air-cooled Condenser 143

8.3.2.1 Air-cooled Condenser Coil Construction 143

8.3.2.2 Fan and Air Requirements 143

8.3.2.3 Application and Rating of Condensers 143

8.3.3 Evaporative (Air and Water-cooled) condenser 143

8.3.4 Codes and Standards 143

8.4 Chiller Efficiency 143

8.4.1 Chiller conditions and guide for selection of water chillers 143

8.5 Additional Information 143

8.6 Useful Formulae 143

Chapter (9) Air Handling Units 207

9.1 Air Handling Units (AHU) 207

9.1.1 Air Filters 207

9.1.1.1 Air Filter Standard (EN779) 207

9.1.1.2 Other Standards for Air Filters and Comparison 207

9.1.1.3 The Most Important Standard for Air Filters (ISO 16890) 207

9.1.1.4 Construction and Installation of Filters 207

9.1.1.5 Area Calculation for Air Filter 207

9.1.2 Cooling Coils & Heating Coils 207

9.1.2.1 Chilled Water Cooling Coil 207

9.1.2.2 Dx Cooling Coil 207

9.1.2.3 Steam Heating Coils 207

9.1.2.4 Hot Water Coil 207

9.1.2.5 Electric Heater 207

9.1.2.6 Fans, Air Velocity, and Bypass Factor 207

9.1.2.7 Water Velocity in Tube 207

Content Page

9.1.2.8 Draw-Through and Blow-Through Arrangement 207

9.1.3 Droplet Eliminator (or) Mist Eliminator 207

9.1.4 Fan (Blower) 207

9.1.4.1 SISW, DIDW Fans and Plenum Plug Fan 207

9.1.4.2 Fan and Noise 207

9.1.4.3 Fan and Vibration 207

9.1.4.4 Geate for Fan Bearing 207

9.1.4.5 How to change the Pulley Size 207

9.1.5 Fan (DB/Arvid/C) System 207

9.1.5.1 Lamps and Ballasts 207

9.1.5.2 Germicidal Lamp Cooling and Heating Effects 207

9.1.5.3 UV-C Lamp Installation 207

9.1.5.4 Design Guideline 207

9.1.5.5 Example for Sizing 207

9.1.5.6 UV System Applied in HVAC 207

9.1.5.7 Safety 207

9.1.6 Humidifier 207

9.1.6.1 Electrode & Resistive Steam Humidifiers 207

9.1.6.2 Humidification Load Calculation (or) Steam Humidifier Sizing 207

9.1.7 Dampers at AHU 207

9.1.8 Pressure Differential Indicator, Transmitter and Switch at AHU 207

9.1.9 Drain System for AHU 207

9.1.9.1 Calculation for Condensed Water 207

9.1.9.2 AHU Condensate Drain Problems 207

9.1.9.3 Proper Trapping 207

9.1.10 AHU Casing Leakage Test (EN 1886) 207

9.1.11 AHU Control 207

9.2 Fire Coil Unit (FCU) 207

9.3 Self-Contained Unit (SCU) and Package Unit (PU) 207

9.4 Humidifier Unit (HTU) 207

9.5 AHU with Recovery Wheel (or) Enthalpy Wheel 207

9.6 Equipment Panel and Frame Construction 207

9.7 Additional Information 207

Chapter (10) Units & Codes 247

10.1 Units and Fittings 247

10.1.1 Circular Ducts 247

10.1.2 Circular Duct Fittings 247

10.1.3 Flexible Ducts 247

10.1.4 Rectangular Ducts 247

10.1.5 Rectangular Duct Fittings 247

10.1.6 Acoustic Ducts 247

10.1.7 Inspection Door 247

10.2 SMACNA and HVCA Standards for Air Ducts 247

10.3 Manufacturer's Standard for Rectangular Ducts 247

10.4 ISO 10138 Flange Standard 247

10.5 Typical Duct Connector Drawings 247

10.6 Typical Duct Support Drawings 247

10.7 Typical Duct Penetration 247

10.8 Thermal Insulation 247

10.9 Minimum Insulation Thickness Calculation to Prevent Surface Condensation 247

Chapter (11) Supply and Exhaust Devices 303

11.1 Cabin Units 303

11.1.1 Installation of Cabin Units 303

11.2 Fresh Diffuser 303

11.3 Grilles 303

11.3.1 Single Deflection and Double Deflection Grille 303

11.3.2 Egg Crate Grille 303

11.3.3 Typical Installation for Grilles 303

11.4 Punkah Louvre 303

11.5 Nozzle (Jet) Air Valve 303

11.6 Recommended Velocities for Supply and Exhaust Devices 303

Content Page

Chapter (12) Units & Codes (Outfitting) 343

12.1 Outlook 343

12.1.1 Typical Installation of Mist Eliminator 343

12.2 Details and Fittings 343

12.2.1 Typical Installation of Weather Louver 343

12.2.2 Louver Free Area Calculation 343

12.3 Dampers 343

12.3.1 Typical Installation of Gooseneck 343

12.4 Plenumbox 343

Chapter (13) Dampers 363

13.1 Volume Control Damper (VCD) 363

13.2 Manufacturer's Standard for Rectangular Ducts 363

13.3 ISO 10138 Flange Standard 363

13.4 Typical Duct Connector Drawings 363

13.5 Typical Duct Support Drawings 363

13.6 Typical Duct Penetration 363

13.7 Thermal Insulation 363

13.8 Minimum Insulation Thickness Calculation to Prevent Surface Condensation 363

Chapter (14) Supply and Exhaust Devices 369

14.1 Cabin Units 369

14.1.1 Installation of Cabin Units 369

14.2 Fresh Diffuser 369

14.3 Grilles 369

14.3.1 Single Deflection and Double Deflection Grille 369

14.3.2 Egg Crate Grille 369

14.3.3 Typical Installation for Grilles 369

14.4 Punkah Louvre 369

14.5 Nozzle (Jet) Air Valve 369

14.6 Recommended Velocities for Supply and Exhaust Devices 369

Content Page

15.3.5 Heating Element with or without Fins 415

15.3.6 Surface Temperature Rise of Heater Casing 415

15.3.7 Moss Switch (Cover Switch for Safety) 415

Chapter (16) Pressure & Ventilation System 441

16.1 Static Pressure, Velocity Pressure and Total Pressure 441

16.2 Procedures to Select the Ventilation Fans 441

16.3 Procedures to Calculate the Velocity Pressure Loss 441

16.4 Determination of Pressure Loss Coefficient 441

16.5 Ventilation Fan Control (CO) 441

16.5.1 Mechanical Ventilation for LQ 441

16.5.2 Consideration of Required Air Flow 441

16.5.3 Ventilation Fan Control (CO) 441

16.6 Machinery Space Ventilation System 441

16.6.1 Mechanical Ventilation for Machinery Space 441

16.6.2 Consideration of Required Air Flow 441

16.6.3 Calculation Example for Transformer Room 441

16.6.4 Engine Room Ventilation (ER) 441

16.6.5 Ventilation Fan Control (MS) 441

16.6.6 Spark Resistance Construction for the Ventilation Fans 441

Chapter (17) Duct Design 519

17.1 General System Design 519

17.1.1 Initial Supply Air Velocity 519

17.1.2 Aspect Ratio 519

17.2 Duct Friction Losses (Duct Pressure Loss) 519

17.3 Circular Equivalents 519

17.4 Dynamic Losses 519

17.5 How to Use ASHRAE Duct Fitting Database 519

17.6 Fan Outlet Conditions 519

17.7 Fan Inlet Conditions 519

17.8 Useful Conversion Factors 519

17.9 Duct Sizing Methods 519

17.9.1 Equal Friction Method 519

17.9.1.1 Duct Sizing Example by Equal Friction Method 519

17.9.2 Balanced Tee Method 519

17.9.2.1 Duct Sizing Example by Balanced-capacity Method 519

17.9.3 Constant Velocity Method 519

17.9.3.1 Duct Sizing Example by Constant Velocity Method 519

17.9.4 Velocity Reduction Method 519

17.9.4.1 Duct Sizing Example by Velocity Reduction Method 519

17.9.5 Static Regain Method 519

17.9.5.1 Duct Sizing Example by Static Regain Method 519

17.10 Additional Information 519
