

## CONTENTS

Preface	i		
Message for Felicitation by Professor Dr. Aung Than Batu	iv		
Message for Felicitation by Dr. Myint Oo	vii		
Acknowledgements	xi		
1. Introduction	1	16. Antagonism of enterotoxigenic <i>Escherichia coli</i> heat labile toxin by some agents in rats	236
2. Classification of bacteria strains	16	17. Effect of some agents for inhibition <i>Escherichia coli</i> (heat stable) toxin in infant mice	237
3. Tested bacteria used for determining the antibacterial activities	18	18. Pathogenicity of <i>Vibrio cholerae</i> by utilizing infant rabbit model	238
4. Pathogenicity of bacteria	22	19. Tissue culture methods for determination of the activity of some plant extracts ...	239
5. Some properties of plants	27	20. Determination of some plants to inhibit <i>Escherichia coli</i> verotoxic activity by using vero cells	241
6. Plants used for antibacterial activity	33	21. Effect of some plants to determine the inhibition of adhesion in Hep-2 cells	242
7. Extraction of plants by different methods	187	22. Effect of sunlight in decontamination of coliforms and faecal coliforms from drinking water	243
8. Screening of plant extracts by agar disc diffusion technique	189	23. Usefulness of bronze containers for decontamination of bacteria from water	245
9. Determination of antibacterial spectrum by test tube serial dilution method	191	24. Use of <i>Moringa oleifera</i> dried seed powder for clearing and sedimentation of turbid water	247
10. Determination of bacteriostatic or bactericidal effect	192	25. Effect of <i>Citrus</i> fruit juices in decontamination of bacteria from water and noodles	249
11. Determination of Minimum Inhibitory Concentration (MIC) by microtiter plate method	193	26. Antibacterial activity of honey and its products	251
12. Determination of the active principles from plants	195	27. Decontamination of bacteria by chemical treatment	252
13. Miracles of plants with antibacterial activity	224	28. Traditional Medicine Formulations	253
14. <i>In vivo</i> study for the prophylactic value of some plants against experimentally induced infection of closed wounds	233	29. Discussion	256
15. <i>In vivo</i> study for the prophylactic value of some plants against experimentally induced infection in open wounds	235	30. Conclusion	260
		31. References	261
		32. Bibliography	272
		33. Keywords index	281
