Contents

Unit 1	Introduction to Microsoft Access 2019	1
1.01	Database Are Everywhere!	1
	Understanding Fields and Records	2
	Understanding Relational Database Management System	3
	Step 1: Opening, Saving, and Enabling Content in a Database	3
	Access Save As Options	4
	Step 2: Recognizing Database Object Types	5
	Navigation Pane Features	5
	How data flows between objects in a database	8
	Examine the Access Interface	9
	Explore Table Datasheet View	10
	Navigate and Locate Records	10
	To find a record using the Find command	11
	Explore Table Design View	11
	Understand Relationships between Tables	14
	Step 3: Modify Records in a Table	15
	Step 4: Add Records to a Table	15
	Step 5: Delete Records from a Table	17
	Save Records in a Table	18
	Step 6: Using Database Utilities	18
	Back Up a Database	18
1.02	Filters and Sorts	19
	Step 1: Use a Selection Filter to Find Exact Matches	19
	Step 2: Use a Selection Filter to Find Records Containing a Value	20
	Step 3: Use Filter By Form	21
	Step 4: Performing Sorts	23
1.03	Access Database Creation	23
	Step 1: Create a Database Using a Template	25

Step 2: Explore and Customize a Database Template	26	
Create a Table Using an Application Part	27	
1.04 Create Northwind Template Install	27	
Unit 2	Creating Database Tables, Linking and Entering Data	31
2.01	Create the Access Database and a Table	31
2.02	Database Fields and Data Types	37
	Table Field Names	37
	Table Field Data Types	37
	Data Types	39
	Default Field Name and AutoNumber Data Type	41
2.03	Create an Access Table in Design View	42
	Design View	43
2.04	Create a Dropdown list	46
2.05	Primary Keys and Foreign Keys	53
	Primary Keys	53
	Foreign Keys	53
2.06	Create a One-to-Many Relationship	55
	Linking Database Tables in Access	55
2.07	Data Entry in Microsoft Access	61
Unit 3	Creating Data Entry Forms, Queries, Reports	64
3.01	Create a Form for Data Entry	64
	Access Form Header	68
3.02	Create a Query to return results	70
	Input Query Boxes	76
3.03	More on Query Criteria	80
	Text Criteria	84
3.04	Microsoft Access Reports	86
	Create a Query to be used as a Report	88
3.05	Using the Report Wizard	91

Renaming a Report	97	
3.06	Report Headers	101
	Changing Font Properties	105
	Report Header Logos	108
3.07	Page Headers	110
	Adjust the Height of the Page Header	110
	The Details Section	113
Unit 4	Designing Tables	116
4.01	Table Design, Creation, and Modification	116
	Designing a Table	116
	Include Necessary Data	116
	Design for Now and for the Future	117
	Store Data in Their Smallest Parts	117
	Determine Primary Keys	117
	Plan for Common Fields Between Tables	118
	Design to Accommodate Calculations	118
	Step 1: Creating and Modifying Tables and Working with Data	118
	Determine Data Type	119
	Step 2: Set a Table's Primary Key	120
	Explore a Foreign Key	121
	Step 3: Working with Field Properties	122
	Step 4: Create a New Field in Design View	123
	Step 5: Modify the Table in Datasheet View	124
4.02	Multiple-Table Databases	124
	Step 1: Import Excel Data	124
	Step 2: Import Access Data	127
	Step 3: Modify an Imported Table's Design	128
	Step 4: Add Data to an Imported Table	128
	Step 5: Establishing Table Relationships	129

Step 6: Enforce and Test Referential Integrity	130	
	Set Cascade Options	131
	Establish a One-to-Many Relationship	132
Unit 5	Working with Queries	135
5.01	Single-Table Queries	135
	Step 1: Using the Query Wizard	137
	Step 2: Specifying Query Criteria, Specify Sort Order, And Run The Query	140
	Step 3: Copying and Modifying a Query	144
5.02	MultiTable Queries	145
	Step 1: Add Additional Tables and Fields to an Existing Query	145
	Step 2: Create a Multitable Query from Scratch	146
	Step 3: Modifying a Multitable Query	147
	Step 4: Use a Total Row to Summarize Data in a Query	150
Unit 6	Calculations and Expressions	152
	Step 1: Build Expressions	152
	Understand the Order of Operations	157
	Step 2: Formatting Calculated Results	158
	Step 3: Recovering from Common Errors	159
6.01	The Expression Builder and Functions	161
	Step 1: Creating Expressions Using the Expression Builder	161
	Step 2: Calculate a Loan Payment with the Pmt Function	165
6.02	Aggregate Functions	166
	Step 1: Adding Aggregate Functions to Datasheets	167
	Step 2: Create a Totals Query	168
	Step 3: Add a Calculated Field to a Totals Query	171
Unit 7	Basic Forms	173
7.01	Create Basic Forms to Simplify Data Management	173

Step 1: Creating Forms Using Form Tools	173	
Step 2: Edit Data in Form View	182	
Step 3: Use Layout View to Modify Form Design	182	
Step 4: Using the Form Layout Control	184	
Unit 8	Basic Reports	186
	Step 1: Creating Reports Using Report Tools	187
	Step 2: Use Print Preview and Export a Report	194
	Step 3: Modifying a Report	195
	Step 4: Sorting and Grouping Records in a Report	197
Unit 9	Data Validation	198
	Step 1: Require a Field	199
	Step 2: Add a Validation Rule with Validation Text	200
	Step 3: Create an Input Mask	202
	Step 4: Create a Lookup Field	204
	Step 5: Modify a Lookup Field	209
Unit 10	Data Analysis	210
	Step 1: Create a Parameter Query	210
	Step 2: Use the Date Function	211
	Step 3: Use the IIf Function	212
	Step 4: Use the DatePart Function	215
Unit 11	Action Queries	218
11.01	Action Queries	218
	Step 1: Back Up a Database When Testing an Action Query	219
	Step 2: Updating Data with an Update Query	219
	Step 3: Test an Update Query	220
	Step 4: Create an Append Query	222

Step 5: Creating a Table with a Make Table Query	223	
Step 6: Deleting Records with a Delete Query	224	
Unit 12	Specialized Queries	226
	Step 1: Use the Crosstab Query Wizard	226
	Step 2: Modify a Crosstab Query	230
	Step 3: Finding Duplicate Records with a Query	231
	Step 4: Finding Unmatched Records with a Query	233
Unit 13	Advanced Forms	237
13.01	Advanced Forms	237
	Step 1: Restricting Edits in a Form	237
	Step 2: Convert a Text Box to a Combo Box	239
	Step 3: Set Tab Order Using Auto Order	240
	Step 4: Set Tab Order Manually	241
	Step 5: Understanding Subforms	242
Unit 14	Advanced Reports	246
	Step 1: Add a Text Box Control	248
	Step 2: Add a Calculated Control	248
	Step 3: Add a Chart Control to a Form or Report	250
	Step 4: Understanding Sections	253
	Step 5: Add a Group Header to Reports	258
Unit 15	Get Connected	261
15.01	Connect Access to External Files	261
	Step 1: Creating a Hyperlink Field	261
	Step 2: Edit a Hyperlink Value	262
	Step 3: Create an Attachment Field	263
	Step 4: Add or Edit Attachments in Datasheet View	263
	Step 5: Remove Attachments in Datasheet View	265

Step 6: Add an Attachment Control to a Report	267	
15.02	Export Data to Office and Other Applications	268
	Step 1: Export a Query to Excel	268
	Step 2: Export Forms and Reports to Excel	270
	Step 3: Exporting Data to Word	271
	Step 4: Exporting Data to a PDF or XPS Document	273
	Step 5: Export a Table to Another Database	275
15.03	Import and Link Data in Access Databases	276
	Step 1: Examine the Tables in the Source Database	276
	Step 2: Link to an Access Table	276
	Step 3: Examine the Format of an Excel Spreadsheet	279
	Step 4: Link to an Excel Spreadsheet	279
	Step 5: Importing an Excel Spreadsheet	281
	Step 6: Examine the Text File Before Importing	282
	Step 7: Import a Text File into Access	283
Unit 16	Fine-Tuning the Database	284
16.01	Database Normalization	284
	Step 1: Implement First Normal Form	287
	Step 2: Implement Second Normal Form	288
	Step 3: Implement Third Normal Form	291
	Step 4: Create Relationships	292
16.02	Built-In Analysis and Design Tools	293
	Step 1: Run the Database Documenter	294
	Step 2: Run the Performance Analyzer	296
	Step 3: Run the Table Analyzer	298
	Step 4: Run the Database Splitter	301
16.03	Database Security	302

Step 1: Create a Navigation Form	303	
Step 2: Add a Password to a Database	305	
Step 3: Create an Access Database Executable	307	
Unit 17	Enhanced Database Techniques	309
17.01	Macro Design	309
	Step 1: Understanding the Purpose of a Macro	309
	Step 2: Creating a Standalone Macro	310
	Step 3: Edit a Standalone Macro in the Macro Designer	312
	Step 4: Create an Embedded Macro with the Command Button Wizard	312
	Step 5: Create an Embedded Macro in an Event Property	314
17.02	Data Macros	316
	Step 1: Identifying When to Use a Data Macro	317
	Step 2: Creating an Event-Driven Data Macro	317
	Step 3: Test and Modify a Data Macro	318
	Step 4: Creating a Named Data Macro	318
	Step 5: Attach a Named Data Macro to a Form	320
17.03	Structured Query Language	320
	Step 1: Understanding the Fundamentals of SQL	320
	Step 2: Interpreting an SQL SELECT Statement	321
	Step 3: Copy an SQL Statement from SQL View	322
