Index	132

*Activities for Social Science Teaching* is a resource and reference book for teachers of social sciences, English language and critical thinking.

It has six chapters with over 120 activities. Each chapter focuses on a different aspect of teaching social science subjects, covering:

- the basics of lesson planning
- presenting new information and ideas
- designing comprehension questions
- encouraging critical thinking
- using data: timelines, statistics, charts and maps
- reviewing lessons and encouraging reflection

Each section uses example texts to give you a better idea of how the activities can be used to create exciting and stimulating lessons, again and again.

There are also ideas for practical activities to personalise social science lessons, including map-making, surveying and creating graphs. These activities will help students to apply their skills and knowledge to their local environment and find relevance in their studies.
